

TireMinder TM66 – Antenna Replacement

Step 1. Place a hard, thin object (letter opener, credit card, etc.) into the middle left side of the TireMinder TM66's rear case. Gently slide towards the corner of the case.

Step 2. Once near bottom edge, pry the back plate off.

Step 3. Once one corner has been pried loose, use fingers to open rest of device.

Step 4. Use a small, Philips head screw driver to remove two screws that hold the antenna in place.

Step 5. Once the two screws are removed, the antenna will slide out. Place the new antenna inside the monitor and attach the two screws to hold the antenna in place. Once antenna is in place, attach the rear plate by snapping the back plate in and securing on all four corners.
